Note : The above table gives the values of t for one-tail test (either left-tail or right-tail test). If we have to find the value of t for a two-tail test at a level, we take the value of $\alpha / 2$ for α. For example, the value of t at 5% level with 9 d.f. is $t_{0.025} = 2.262$ and the value of t at 1% level with 11 d.f. is $t_{0.005} = 3.106$
